

Pallet cover and sheet

What are Pallet Covers and sheets?

Polyethylene Pallet Covers are gusseted poly bags that are used for cover products on a pallet and are an economical alternative to a pallet cover tarp. They are vital for warehousing and shipping operations. Polythene Pallet Covers and Top Sheets are now the most widely used form of packaging by companies requiring total product protection.

Plastic Pallet Covers can have shrink characteristic and can be used as manual shrink hoods, another is non-shrink pallet covers and can be used as protective plastic hoods for packaging pallets. They are very practical when used with a stand as a lot of sizes of hoods can be placed at one location. This definitely reduces the time and surface needed for the packing process.

Normally, our plastic sheets are made of polyethylene (LDPE, MDPE, HDPE). These films are offered in rolls or in the form of cut-sheets. LDPE sheeting is ideal for protecting products from moisture damage at the base of pallets and top sheets protect against dust and moisture during transit and storage.

Application

They are often used in different areas and industries, such as the wood and construction industries, manufacturing industries, animal feed and food industries and more. Perfect for most shipping needs.

performance

Dustproof and dustproof

Our strong plastic polythene hoods are designed to go over pallets, securing them safely inside protecting them from weather conditions, dust, dirt, moisture and shipping damages.

Anti-UV

Are you leaving your pallets and product outside for an extended time? If so, your product may need UV resistant Pallet Covers. Our ultraviolet inhibitor prolongs the life of the covers when exposed to lengthy periods of sunlight. Otherwise, you can use pallet covers that do not contain any additives.

Durable

Our pallet Cover Bags are made from durable and clear materials, which ensures the bags are long-lasting and the materials stored inside are easily examinable.

Our Plastic Pallet Cover Bags and Sheets

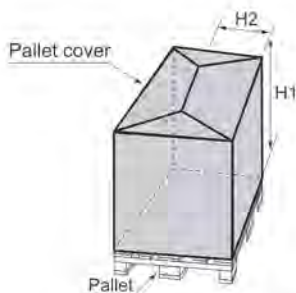

We manufacture and supply significant quantities of polythene pallet covers and pallet top sheets in different dimensions and thicknesses., with a range of colours or with special properties including food-safe or UV-resistant.

They are available in 'shrink' and 'non-shrink' polythene formats, width, length and thickness according the need, clear or opaque in color.

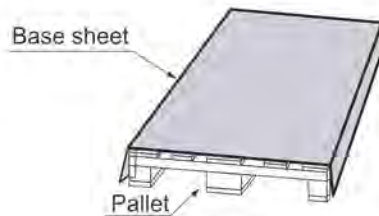

Pallet Covers range from 1 Mil to 4 Mil thick. 1 Mil pallet cover bags are often used for temporary protection of items on a pallet. A 4 Mil pallet cover bag is not only a thicker plastic, for better protection, but are often reusable pallet covers that can be used to cover and uncover palletized items repeatedly.

Our top sheets that best suit your application can be manufactured use high strength polythene material, however, we also produce cost-effective recycled plastic. Our recycled polythene is produced almost entirely from our in-house recycled production waste resulting a very clean polythene recycled grade in greater levels of quality and consistency. Pallet top sheets in this material provide a cost-effective, environmentally friendly packaging solution.

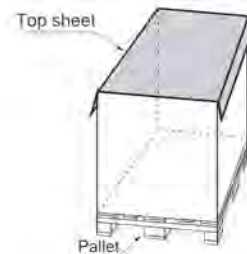

We supply both base and top sheets in loose or pe sheet film roll for automatic application

Protect Your Pallets with pallet covers and sheets

- 1、 Various sizes to suit multiple pallet configurations
- 2、 Long durability, lightweight, hygienic
- 3、 Suitable for making a completely sealed pallet
- 4、 Available in variety of slip factors to increase stability
- 5、 Designed to prevent damp and moisture contamination of your product
- 6、 High film quality, good protection for packaged products
